

## Instructions For Masonry for Onsite Garages

1. Concrete pad should be exact size of building. Example 24' x 24' garage requires a 24' x 24' concrete or block foundation.
2. Shawnee Structures strongly recommend 1 or more courses of block above concrete. Benefits include :
  1. Block walls are typically more watertight than studded wall above concrete
  2. Interior of garage can be washed down without worrying about rotting of pressure treated sill plate
  3. Interior height of garage is increased to 9' high.
3. Block Openings for doors
  1. Fiberglass entrance door 41"
  2. Garage door 6" wider than door, Example 10' door = Opening 10' 6"
4. Mud sill anchor straps should be placed 12-16" from each corner and then ever 6'. Anchor bolts also accepted. Anchor bolts should be placed at least 5" from outside of block wall.
5. Shawnee Structures will build walls to fit openings in block.
6. If foundation is more than 2" out of square or 2" off level , Shawnee Structures reserves the right to refuse to build on foundation.

### Mason Contractor Suggestions

1. Barefoot Concrete 814-839-4689 Alum Bank. Barefoot works in Bedford  
Barefoot is known for his high quality work.
2. Zellem Masonry 814-483-0946 Somerset, PA . Somerset County
