

## 2025 Log Cabin Information

**Certified Cabins:** Our modular homes are designed to meet your local residential codes (in PA, MD, and WV). All drawings, state labels, and required documents are included. Each home is individually designed and accepted by your state or their assigned agencies. These homes include 2x6 walls and higher insulation values, as required by residential code. All these homes are designed to be set on your prepared crawl space foundation or full basement. The foundation is not included in the price of the cabins. Many custom features are available, and custom layouts are commonplace. We will gladly help design your home to your preferences and needs.

**100 Mile Price Sheets:** Our 100-mile pricing applies to regions within 100 miles of our main office in Bedford, PA, including areas in Pennsylvania, Maryland, and West Virginia. Locations beyond this distance will be individually priced. Local pricing discounts are available for areas within 50 miles.

**Maryland Quotes:** Maryland has additional requirements including sprinkler systems and more rigid requirements for insulation. Additional costs are typically between 5-10%. Individual quotes are required.

**Deposits on Log Cabins:** All payments for Modular Log Homes are check or bank transfers. 20% deposit to place an order, 70% payment with certified check 10 days prior to scheduled delivery, and final balance when delivery and installation are complete. Terms may vary. Delivery of cabin must be completed within 60 days after cabin is completed unless other arrangements are made in writing.

**Final Quote:** Prices are subject to change without notice. A written quote including delivery is required to confirm final price. For quotes and more info, contact Solly Hostetler at [solly@shawneestructures.com](mailto:solly@shawneestructures.com) or 814-623-8212.

**Price Disclaimer per the manufacturer:**

*Due to unknown material costs at the time of construction, Cozy Cabins LLC reserves the right to renegotiate the selling price of a project until 3 months before production begins. If material costs do cause us to raise the selling price of a project, we'll notify you and give you up to 21 days to decide whether to continue at the new price or cancel the order.*

## Log Cabin FAQ

Here are some common questions. If you have any additional questions, contact Solly Hostetler at [solly@shawneestructures.com](mailto:solly@shawneestructures.com) or call 814-623-8212.

- **Where can larger prints of floor plans be found?** Floor plan PDFs can be found on our website in the Log Cabins section. Additional sizes are available upon request.
- **How long does it take from order date to completion of cabin?** The typical lead time varies depending on the season and other factors. Smaller cabins generally have a shorter lead time. Onsite time after delivery ranges from 2-4 weeks for most one-story models to 4-6 weeks for Mountaineer, Mountaineer Deluxe, Alpine, and Chalet models once the cabin is on the foundation. Contact sales rep for current lead time.
- **Who is responsible for permits?** While our residential structures already include a full set of drawings that have been reviewed to ensure code compliance, the actual acquisition of a building permit and other local building requirements are the customer's responsibility. Since the plans have already had a code review and our portion of the project will be factory-inspected, this process is typically much easier than it is for a site-built structure.
- **Can floor plans be modified?** Most floor plans can be modified. Common changes include adding closet spaces, changing window and door placement, and changing interior walls. We also offer a wide selection of options including french doors, decks, dormers, and much more.
- **How much does a foundation cost?** Foundations, driveways, and site work are not included in the package price. A crawl space (6 rows of block) typically costs around \$10,000 to \$20,000. A full basement with concrete typically costs around \$30,000 to \$50,000. We provide a drawing for your mason that includes size and layout of the foundation. The mason contractor is responsible to meet local regulations for the foundation. Sill plates, beams and support posts are considered part of the foundation. We recommend mudsill anchor straps for sill plates. (Simpson MAB is one good choice). Anchor straps should be placed every 4' (verify with building inspector).
- **What is included with home packages?** This question is one of the most popular ones we get during interactions with our customers. We offer a very complete package right from the start, so the answer to that question gets quite lengthy. This includes things like: complete exterior with log siding (protected with exterior sealer), triple-pane insulated vinyl windows with shutters, insulated walls and ceilings, knotty pine interior with polyurethane finish, engineered White Oak floors, full electrical system including panel box, breakers, lights & ceiling fans, bathroom fixtures (even toilet paper & towel holders), solid pine kitchen cabinetry with dovetailed soft-close drawers, etc. Even the shipping costs (within 100 miles of Bedford, PA location), crane rental, setup costs, and taxes are all included!
- **Are appliances included in home package?** We install all the kitchen cabinetry, counter tops, and faucets – but not the appliances (such as the range, refrigerator, and dishwasher). We find that most customers would rather choose these items themselves. The one appliance we do include is an over-range microwave.
- **Furniture & Window Treatments?** And then, of course, there are furniture and window treatments (curtains, blinds, etc.) which are not provided. Decorate your Log Home with your own unique touch!

## Log Cabin FAQ

- **What is included in the electrical package?** A panel box will be factory-installed in your cabin, but you will be responsible for bringing the power to the panel box. If the panel box is installed inside the cabin, a conduit will be provided through the floor or exterior wall for this connection. Or, if you are putting your cabin on a basement, we can temporarily tuck the panel box up under the floor and swing it down onto your basement wall when the cabin is set. The electric package includes all wiring, switches, and light fixtures listed on plan.
- **Can customer choose specific light and fan fixtures?** Light fixtures and fans can be omitted from the package if you prefer alternative fixtures.
- **What does the onsite plumber need to do?** The plumbing is complete on the main floor of the cabin, with all water lines and drains stubbed through the house floor beneath each fixture. But your plumber will need to make the final connections below the floor, and to your well and septic system. We also offer rough plumbing for second-story bathrooms, but your plumber will be responsible for making all plumbing connections on the second story.
- **What is the standard heat source?** Customer is responsible for heating system. Electric Baseboard heat is available (see options for pricing). We also offer a through-the-roof wood stove chimney. Wood stoves are usually not accepted as the primary heat source in certified cabins. Virtually any traditional heating system (including central heat & A/C or radiant floor heating) can be installed by a local contractor.
- **What parts of a certified home can be eliminated?** The certified homes are inspected during construction. The insulation package, electric, plumbing, and interior wall covering are typically required for inspection. Kitchen, flooring, and light fixtures can typically be eliminated.
- **What are the options for interior walls?** Wall covering options are standard pine. We do not offer drywall as an option.
- **Are basement floor joists insulated?** No, but floor joist insulation can be installed onsite after plumbing and electrical work is completed if required by code regulations.
- **Are steps into basement included?** The bigger floor plans have steps included. When steps are shown on plan, the basement steps, including basic railing are included in package price.
- **Are roof gutters and downspouts included in package price?** We recommend installing roof gutters & downspouts. We do not install them to allow narrower shipping widths and to prevent gutter damage during craning of the modules. This must be done by a local contractor.
- **Are steps to porch included in package pricing?** The number of steps needed varies with each project, so they are not included in package pricing; but they can be priced when final grade has been completed. Generally, pressure treated steps with log railings are \$200 per step.
- **What kind of financing is available?** We do not offer any financing. Your local bank is often a great place to look for home construction loans.
- **Who do you recommend for excavating, plumbing, ect?** We have built relationships with local sub-contractors and would be happy to provide a list upon request.
- **Can Shawnee Structures be the general contractor?** Most bank construction loans require a general contractor to provide oversight to all the contractors and to disperse all moneys from the construction loan. Shawnee Structures is available to act as the general contractor for projects located within 50 Miles of our Bedford office. See sales rep for more details.

# Modular Log Homes

Floor Plans | Pricing | Options

We are an authorized dealer of Cozy Cabins LLC, where one of the primary goals is building homes with top quality workmanship. These homes come to life in a Lancaster County, Pennsylvania facility, where strong work ethics and good craftsmanship are still handed down from one generation to another.

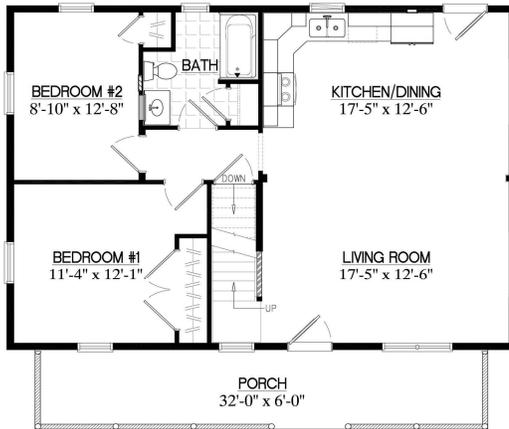

Our team is committed to building your home your way. The style, size, and features are for you to choose; but if you prefer it quick and easy, just choose one of our well-designed floor plans that best fits your lifestyle. If you want to put your own personal touch into your layout, you have the freedom to customize one of our floor plans, or even design your own from scratch! Just show us what you want and our design team will create accurate scale drawings from your ideas.

And to top it off: All our homes are modular construction, meaning they are pre-built and delivered to your job site in sections, already 75%–90% complete, allowing you to move in much more quickly and with fewer headaches. Another benefit is the fact that your home is constructed under a roof in a controlled environment so no rain or snow can cause mold issues later. It's efficient too, with less wasted building materials than traditional construction. Your 21st century modular log home is something for you and the next generations to be proud of. Let's do this together!
